

# (Professional Characters Voice) (Production)

New ~~on~~ <sup>in</sup> Screenwriter 7 Pro.

V.V.T. (Virtual Video Technology)  
Professional Characters Voice Production  
#17 Most voice recognition software sounds robotic, because a human speaks in (A) Pitches (B) Harmonic Patterns (C) Volume manipulations which creates individuality. (D) Speed/Duration

## On Screenwriter 6

You can select a few basic characters and adjust the speed ~~of~~ of the speech and/or aspect of the human characteristics of speech and adjust the pitch/frequency, but it will still sound robotic.

## V.V.T. Explained

using algorithmic calculations and human harmonic reproduction, we can recreate professional actors / actresses voices to an unrecognizable or almost perfect reproduction. And using the MIKES keyboard with a volume pedal and speed pedal, whereby after the harmonics will be constant and pitches are often controlled by an algorithmic constant based on word selection and output and create (Professional Characters Voice Synthesis) (w/keyboard pitch and tempo manipulations)

Now Denzel Washington, Will Smith, Halle Berry and even Ertha Kitt, voices can be saved in Screenwriter. And using V.V.T. create full featured films at our Microsoft V.V.T. Production Studios Daytona Beach.

New on Screenwriter Pro 7 a P.C. Studio Interface.
